(a) extra mortality
share of Calhoun-like runs
C1
C1′ (minimal)
background mortality (10^{-3} per week)
(b) system size
persistent withdrawn share
Calhoun-like runs
spread of T_{ext} (IQR/median)
cells L^2 (same density)
(c) rule ablations
C1
−R1
−R2
−AV
−R7
−R1 −R2
no rules
$w = 0$
preregistered
primary evaluator
n=120
n=40
share of Calhoun-like runs
(d) implementation variants ($n = 200$)
single-pass retreat-site rule
nest period 3 weeks
asynchronous update
async., soft site capacity
initial ages 4–52 weeks
initial ages 4–80 weeks
pups born at $s = 0.25$
background mortality 0.003
C1
C1′
share of Calhoun-like runs
(e) sensitivity (11 factors)
