
keeps crowding high
Boom
competent founders, no resource limit
Crowding
experienced occupancy $m > m_c$
Adults lose competence
no recovery after a_w
Non-breeding standing stock
long-lived adults
Rescue
adult recovery $> \epsilon^c_{\mathrm{ad}}$, or sustained removal of non-breeders
damage exceeds the maximal gain ($\nu > \nu^*$)
few competent demonstrators ($\theta < \theta^*$)
they join it
Juveniles
in their learning window, $a \leq a_w$
Cohorts mature incompetent:
competence not passed on
Natality stops:
the closed colony ages and dies out
